PROFESSIONAL SUMMARY

QA Automation Engineer with 2+ years assuring the quality of a **SaaS** HR and Payroll platform used by clients across Latin America. I design, code and maintain **end-to-end and REST API automated suites** in **Cypress**, **Playwright** and **Postman**, integrated into the **CI/CD pipeline** so regression runs on every delivery. I code in **JavaScript** and **TypeScript**, and use **SQL** to validate data integrity and consistency across services. I run **load and stress testing with JMeter**. I bring **AI assistants** into the testing workflow (test case generation, automation scaffolding and failure analysis), critically validating every output before integrating it.

Regression cycle from 1 day to 1 hour in CI/CD • 60 sprints validated end-to-end • 1,000 to 2,000 employees/minute under load • 10+ QA interns trained.

TECHNICAL SKILLS

End-to-end automation: design and maintenance of reusable frameworks • automated scripts across Web and services • test cases derived from acceptance criteria and user stories • traceability • **Cypress • Playwright • Selenium**.

API testing: automated **REST API** testing with **Postman** • validation of responses, status codes and data consistency across services.

CI/CD and version control: integration and execution of automated suites in continuous delivery pipelines • **Jenkins** (production) • **GitHub Actions** (personal projects) • **Git • GitHub** • branching and pull requests.

Performance testing: load and stress testing with **JMeter** • bottleneck identification • analysis of stability metrics in **AWS**.

Languages and data: **JavaScript • TypeScript • Python • SQL (MySQL / PostgreSQL)** • validation of data integrity and consistency across applications.

AI applied to testing: test case generation, automation scaffolding and failure analysis with **Claude Code**, **Claude (agents, subagents, agent skills)**, ChatGPT and Gemini, with critical validation of the generated output.

Functional testing and defects: functional, regression, integration and exploratory testing with a risk-based approach • test plans and test cases • defects documented in **Jira** with reproduction steps, expected vs. actual results and evidence.

Agile and collaboration: **Scrum • Kanban • Jira • Confluence** • Slack • VS Code • technical documentation, onboarding and QA mentoring.

PROFESSIONAL EXPERIENCE

QA Analyst • Visma LatAm April 2024 - July 2026 • Argentina • Hybrid

Production SaaS HR and Payroll platform: digitally signed payslips, vacation, leave and employee lifecycle management.

- **End-to-end and API automation:** designed, coded and maintained the automated regression suite in **Cypress and Postman** across web interface and services, migrating manual checks to automated ones and cutting the regression cycle from **1 day to 1 hour**.
- **CI/CD integration:** integrated and ran the automated suites inside the **Jenkins** pipeline, running regression on every delivery.
- **From acceptance criteria to tests:** turned user stories and acceptance criteria into traceable test plans and test cases, across **60 sprints validated end-to-end**, under the company's **ISO 9001** quality standards and its annual external audit.
- **Risk-based exploratory testing:** covered the areas with the highest business impact and failure likelihood, reserving automation for stable, repetitive flows.
- **Performance testing:** set up and ran load and stress tests with **JMeter**, validating **1,000 to 2,000 employees per minute** signing payslips and running other web operations with no application downtime, and analysed the resulting stability metrics in **AWS**.
- **Results analysis and defect triage:** analysed execution reports to isolate whether a failure came from infrastructure or code, and logged defects in **Jira** prioritised by risk, following up with Development through to resolution.
- **Integration and data validation:** verified the flow across HR, Payroll and Performance Management, using **SQL** to check data consistency and business process continuity between applications.
- **Standards, documentation and mentoring:** documented QA features and processes in **Confluence**, creating the team's onboarding material, and supported the training of **10+ QA interns**.

AUTOMATION PROJECTS

Sociedad Patitas: end-to-end suite with Playwright • CoderHouse, 2026

17 end-to-end tests with Playwright on a web application I built myself: form validation, full happy path, **localStorage** persistence, search, rejection, reservation and reset flows. Local HTTP server with CDN redirection for **offline, deterministic** execution. Application built from scratch in **JavaScript**, **HTML** and **SASS**, deployed on Vercel. github.com/sharonrodrigueзлиendo22/sociedad-patitas-js.

Ticketazo: end-to-end automation framework with Cypress • QA Automation • XAcademy, Santex & TWPF (2025)

End-to-end automation of functional and non-functional test cases on a real ticket-selling platform, with positive and negative scenarios, collaborative work on **GitHub** and agile methodology. github.com/sharonrodrigueзлиendo22/TicketazoG10Automatizado.

EDUCATION, CERTIFICATIONS AND LANGUAGES

Associate Degree in Data Science and Artificial Intelligence • IFTS N.º 18 • in progress.

Application Development • CoderHouse • in progress.

QA Automation • XAcademy, Santex & TWPF (2025). **Professional Testing Master** • UTN FRBA (2024).

Manual and Automated QA • Argentina Programa & MindHub (2023).

Claude Code in Action • Agent Skills • Subagents • Anthropic (2026). **Languages:** Spanish (native), English (intermediate B1).
